SURF'S UP IS NOT YOUR AVERAGE CORPORATE PLAN. IN FACT, IT'S NOT A CORPORATE PLAN AT ALL.

MENTS

Instead, it's an agenda for growth and improvement across the Adur and Worthing areas that encompasses topics as diverse as the communities which choose to live, work and spend time here. Surf's Up can be seen as an approach for a new era of local governance, evolving from the strategic agenda set early in 2014 by Catching The Wave.

This agenda recognises that the function of Local Government is changing, and that it's no longer appropriate for Councils to do (or try to do) everything. Instead, Adur & Worthing Councils are moving to become Civic Social Entrepreneurs, creating and sustaining social value together with the relevant communities locally, regionally, nationally and internationally.

Surf's Up contains around 40 different prioritised outcomes (framed as commitments) which will guide the Councils' activities over the next two years, and be reviewed every six months by Elected Members. Once these ambitious commitments have been delivered, then we will:

- Have delivered (in whole or in part) 15 major regeneration projects, creating 136,000m² of business land, 5,000 new jobs, 1,000 jobs in construction and safeguarding a further 1,300 jobs in the area
- Have dramatically grown our capability to deliver projects in partnership with our communities, cutting across the traditional silos of individual organisations for the benefit of all local residents and businesses

THE REAL

2

- Have redesigned the delivery of our services in ways which meet the current and emerging needs of our customers, businesses and the communities which either call us 'home' or want to do so
- Have recreated our digital offering to transform the way that our customers can interact with us, and the way in which our staff can work for the benefit of our communities
- Regular reviews will keep our approach "live" when activity has been concluded, we will remove it from the list and where opportunities arise, we will move to capitalise on them to ensure the long term health and prosperity of our places.

3

• And, in delivering our Surf's Up ambitions, we will also become a far more agile and adaptive organisation ready to meet the challenges, opportunities and changing environment in which we find ourselves

Alex Bailey Chief Executive at Adur & Worthing Councils January 2015

What is it?

4

In Catching the Wave, we posed a question to the communities of Adur and Worthing - did they have the ambition and energy to seize a number of presenting opportunities or were both places happy to remain in the 'backwash'? The answer was an emphatic 'yes' to grabbing the opportunities and Catching the Wave set out a direction of travel that has steered a range of our strategic activity over the last nine months. The Cabinets of both Councils (in Summer 2014) noted the progress that had been made and agreed further outline activity over the next 12 to 18 months.

If Catching the Wave was a call to action, then 'Surf's **Up'** is about how we best get in the water and ride the surf. It seeks to set out over the next two years a number of the priority issues that we will tackle, challenges that we will address and opportunities we will seize. It is not, however, a long list of 'everything we will do'. It is key strategic headlines ... and other waves will come along that perhaps we have not yet anticipated and planned for (and that's just the nature of surfing!). What is key is that we as Councils are agile enough to see and catch those waves for the benefit of our communities.

'Surf's Up' is not intended to be an 'old school' Corporate Plan. The experience of many is that such Corporate Planning can be energy intensive, can become obsolete within weeks and can at times ossify organisations and systems in ways that run counter to the agility we require. 'Surf's Up' therefore sets out around 40 prioritised outcomes (framed

as commitments) over the next two years that we will take seriously, strive to achieve and oversee without creating a large bureaucracy around... we will however, put in place systems to ensure that we are making progress on all (and if circumstances change ensuring that we stop activities or identify and bring new opportunities in). The details (the precise "how") will be embedded in Business Plans/Service Plans and objectives for Teams and individual lead officers rather than captured here in 'Surf's Up'.

REVISITING SOME FUNDAMENTALS

In Catching the Wave we set a direction of travel for our Councils and our places. We identified the challenges and opportunities. (In particular an upturn in the local and national economy; an interesting 'human long shore drift' of inward migrants from other parts of the south coast and London; the challenges but opportunities arising from austerity; an increase in asset values; and a much greater understanding of the presenting opportunities of digital, new technology and how we interact with residents and customers. Catching the Wave also sought to identify key patterns from our history that will be of value to our future for example our ability locally to make the use of science, technology and creativity). And we sought to be honest about some of the challenges we faced.

WG EC AC WB

CULTIVATING **ENTERPRISING** COMMUNITIES

NAMELY:

What does this mean for the councils?

Around the UK, local authorities are responding differently to the challenges of 'austerity Britain'. Some are 'hunkering down' and hoping that the storm passes, some redrawing their roles and service offer with the very real concern of demand led budget deficits and others fundamentally rethinking what they are for and how they operate moving forward. Catching the Wave (enthusiastically endorsed by politicians, partners and businesses) clearly places Adur and Worthing in the latter camp. Drawing from our history to design our future, rejecting 'hunkering down', chopping the salami and actively recognising that now is the time for ambition and organising ourselves to best catch the momentum of the 'waves' we have.

As Councils Catching the Wave enables us to rethink both our purpose and our business model. We clearly leave behind the notion of being solely municipal service providers for one where our purpose is to create and sustain healthy and vibrant financial and social economies in our communities. We want to help realise the ambition of our residents, communities and businesses and encourage people to step up and play a role in leading their places forward. And, to be very clear, we intend to continue to provide an essential safety net, manage the 'commons' (the community resources that are accessible to all members of society and must be protected and managed for the good of all) and provide the best services and solutions that we possibly can, meeting the long term needs of our residents and communities. In short we place ourselves at the heart of our communities (rather

than the middle of them); we understand and join up the social networks that exist and view ourselves not just as an organisation but as a mechanism to create the places our communities want to be.

In our networked world, change now comes about by making emotional connections, stimulating grassroots ideas, sharing information and data, working with communities, customers and service users to create change together, breaking down hierarchies, liberating the insights and energies of the front line, thinking about systems rather than organisations, distributing power, and having a shared sense of purpose. What a contrast with the traditional local government way, which relied on hierarchical power, leaves leaders to drive innovation, defers to those of higher rank, uses tried and tested methods and adheres to a prescribed 'vision'. Our established approaches to local government can be almost designed to crush change.

To make this shift in purpose requires a change in our mind sets. Whilst pushing hard to improve the quality of all of our services (and innovate particularly using digital technologies) we are already starting to

from the mind set of municipal delivery to all and increasingly becoming Civic Social Entrepreneurs creating and sustaining social value. This means that in leading our communities we are identifying (often new) needs and resources and are skilled in bringing them together to create often long term and sustainable solutions for the benefit of our places. We do not seek to be 'fonts of all knowledge' (or experts on everything) but we recognise our role in community leadership is at times about bringing the right people together, facilitating the right conversations and deciding what our position should be in any solution. None of this is about reducing the importance of providing the democratic mandates or 'social safety nets' and 'legs up' that we will continue and it is important that we define clearly the roles of public participation, the reduction of social inequality and the role of local democracy in this.

This shift in purpose and mind set is both exciting and challenging. It requires us to reconsider at times the way we think, access and relate to the outside world and how we gracefully shift some of our solid and reliable governance systems (in terms of formal decision making and internal operating systems) to meet the challenge. At times this transition will be significant and difficult. This is very much a process over time rather than a 'one day change' but the activities set out in 'Surf's Up' will only successfully come to fruition if we

6

We want to help realise the ambition of our residents, communities and businesses...

7

...we are already starting to move from the mind set of municipal delivery to all and increasingly becoming **Civic Social Entrepreneurs** - creating and sustaining social value.

'Surf's Up' is split into four sections - namely the three wave catchers (Supporting Wealth Generators, Cultivating Enterprising Communities and Becoming Adaptive Councils and Systems) and a fourth 'Waxing the Board' - which has some of the key stuff we need to fix, and fix soon, to be successful in delivering our ambitions. Each of these

sections sets out a series of commitments that we the Council make to the communities of Adur and Worthing. By commitment we mean that we are sincerely bound to them as courses of action and recognise their importance and value. We will prioritise them and use our best efforts to make them happen.

WAXING

THE

BOARD

Wave Catcher

SUPPORTING WEALTH GENERATORS

Catching the Wave sought to draw on our history to identify some of the 'natural resources' that our future economic prosperity will be built upon. Our 'coal' includes our abilities in the science, technology and creativity sectors, our natural and built landscape, our creative and cultural sector, the skills and talent of our resident community, development land potential, our proximity to London, Gatwick and the South Downs National Park and the strength of our local Further Education offer. We also recognised that there were some significant challenges in terms of strengthening some new business sectors, inward investment, the relative lack of sites for new business (and the slowness to develop those that we have), the absence of a Higher Education presence, infrastructure (particularly road and rail), inconsistent international reach, and our image and brand. Perhaps not surprisingly a significant part of our role is to get behind our strengths and work on reducing the impact (or removing) some of the challenges and barriers.

Our 'coal' includes our abilities in the science, technology & creativity sectors

PURPOSE OF DIRECTORATE FOR THE ECONOMY:

Our newly created directorate for Economy was formed with the clear purpose of leading and driving forward our economic growth ambitions; securing investment; and providing a vibrant cultural offer that supports the local economy. We will work with our business partners and stakeholders to secure government and private sector investment in the design and delivery of our major infrastructure and regeneration projects. Our cultural offer is improving and we need to demonstrate and articulate the economic and social value that a strong and vibrant cultural and events programme provide for local residents and the economy. The directorate is outward facing, business and visitor friendly and hugely ambitious.

THE FULL LIST OF COMMITMENTS MADE TO THE ADUR AND WORTHING COMMUNITIES BY THE DIRECTORATE FOR THE ECONOMY CAN BE SEEN ON PAGE 24 – 29

We strive to make Adur and Worthing unique and world class business and visitor destinations where business ambition is supported, not hindered, by our public services leadership and interventions. We have supported our businesses to grow and expand during recessional times (such as GSK and ETI) and have notable multi-million pound inward investment successes including Rayner. We will attract and secure private sector developers to deliver the much needed new homes, jobs, leisure and cultural facilities and business premises that will ensure that Adur & Worthing is the leading economy along the Coast in West Sussex. If we delivered our 15 major regeneration projects we would create 136,000m² of business land, create 5,000 new jobs, 1,000 jobs in construction and safeguard a further 1,300 jobs. In the same period if we built the 7,000 new homes planned for in our emerging Local Plans in the next 10 years, we could generate an additional £9m-£10m in council tax revenue for the authorities.

SUPPORTING **WEALTH GENERATORS**

(11)

Wave Catcher

CULTIVATING **ENTERPRISING COMMUNITIES**

In Catching the Wave we set our ambition to develop Enterprising Communities across Adur and Worthing (communities of geography, common interest, business, age or type of resident etc.). By 'enterprising' we mean communities that can come together, recognise the challenges they face, innovate, create and realise opportunities, effectively taking and managing risks, encouraging active participation, self-reliance and selfdetermination and communities that become resilient to economic or other shocks and where people have the confidence and pride to stand on their own two feet to compete and fully participate in community life.

This is about supporting and unleashing the power of people in community to run and improve their own lives and the places in which they live, whilst maintaining an essential safety net (and recognising that some communities may require a more active and enabling support to make progress).

This is about supporting and unleashing the power of people in the community

PURPOSE OF THE DIRECTORATE FOR COMMUNITIES:

Our newly created Directorate for Communities was formed with the purpose of driving a lasting change in the relationship between the Councils and its communities. We are moving away from a traditional model of Council controlling power, decisions and resources to one of far stronger engagement with our communities that will see us 'letting go' and in some cases getting out of the way completely. For example, under the working title 'Rethinking Parks' we will work with groups and clubs to explore how they can take greater responsibility in the ownership and management of the Councils' parks facilities; we will remove bureaucracies that stifle community innovation and creativity facilitating resident led initiatives such as Play Streets; we are transferring our Worthing Council's leisure facilities to a newly created local Trust - South Downs Leisure - that will be run by a Board of local residents.

> THE FULL LIST OF COMMITMENTS MADE TO THE ADUR AND WORTHING COMMUNITIES BY THE DIRECTORATE FOR COMMUNITIES CAN BE SEEN ON PAGES 30 - 34

In the context of austerity, the Councils recognise the importance of genuine partnerships that cut across and engage statutory partners, the voluntary sector, community groups, neighbourhood, and residents. We will continue to support the principle of early intervention that can prevent a host of social and health problems later down the line for families, saving valuable and costly resources when compared with intervention at crisis stage. This approach will be reflected in our work on Public Health, and Think Family/Early Help programmes.

We are committed to ensuring that our communities are housed in good quality and affordable accommodation a real challenge in areas where demand outstrips supply and the opportunities for development are limited. Through initiatives such as Think Family Neighbourhoods resources will continue to be targeted in deprived areas to build resilience in those neighbourhoods. Critically this work will increasingly involve the Councils designing services with residents; so that they reflect what our communities know is needed.

CULTIVATING ENTERPRISING COMMUNITIES

Catching the Wave is clear that being effective organisations in the delivery of services is a given ... but not in itself sufficient. As Councils (and as a wider system that governs our places) we need to be more adaptive. A term borrowed from biology, adaptation is the process that an organism uses to be better able to live in its habitat and not to die out when the habitat or climate changes. It is about agility, it is about reading and understanding the outside world and it is about bringing together competing interests and views (via community leadership) to help define and shape our collective futures. We recognise that there are some strong elements from our civic history that we will wish to retain (e.g. openness, transparency, accountability and fairness) and that we will need to ensure we do not become stuck or risk averse with unnecessarily bureaucratic processes that prevent us from responding rapidly to the real needs of communities, businesses, organisations and partners.

It is about agility, it is about reading and understanding the outside world In Catching the Wave we identified this will require long term attention and that we will all need to think about our current mind-sets and cultures, our expectations of partners and partnering, how we apply our resources and to what? Resources in this context means more than just money. It includes how we use our people, the value in our relationships, data and information, intellectual property, land and a variety of other assets ... including our personal energies and assets over which we may have no 'formal' authority. If we are to genuinely move forward the agendas in our three key Wave Catchers then we will need to ensure that all parts of our business look carefully at any maladaptive, static, solid or 'stuck' systems and design them out. If not, then our aspirations around economic and social vibrancy will not be brought fully to realisation.

(14)

The Adaptive Councils agenda is an area where in the nine months since *Catching the Wave* was conceived we have had the opportunity of understanding more about our community and customer needs, the potential for digital and some of the ways that our current operating systems (human and technical) may be holding back our future chances. We have had the chance to become clearer for example on how we innovate, how we might best meet customer need, how we might reduce our operating costs and improve our offer to the customer and how we might do this within an envelope of public service austerity without restricting our chances of realising our long term ambition.

15

Wave Catcher

WE HAVE BEGUN TO MAKE PROGRESS WITH THREE CRITICAL CATALYSTS TO ADAPTIVE STATUS, NAMELY:

- The design and (co-design) of our service offer
- Ensuring we build in digital solutions via our digital roadmap
- Creating a consistently high quality customer service offer across all services (and building the 'customer service profession' and the cultural support required to get there)

THERE ARE A NUMBER OF OTHER AREAS THAT WE WILL BE FOCUSSING OUR ATTENTION UPON, NAMELY:

- Ensuring that our core ('back office') business services are consistently high quality, cost effective and have the necessary capacity (including external support) delivered with full understanding of the strategic needs of the organisation
- That we develop longer term strategic financial planning, become more commercial in generating sustainable revenue streams, move to a more 'profit and loss' way of working with managers understanding and developing their businesses and create the additional flexibilities required for those revenues to be generated. Our aim is to be able to operate 'free of Government grant' before 2020

- That we create space to think, invest in cultural support required to bring our *Catching the Wave* aspirations to life, build the capacity of leaders across organisation (and the system) and that we develop performance management systems that enable and support delivery, rather than counting things 'for the sake of it'
- That we understand and use the data that we hold and the business intelligence that we need as both a customer service provider and a community leader

(16)

- That we 'think partnerships', are not afraid to lead partnership agendas, challenging where appropriate, standing back and allowing others to lead where they are better placed and seeking to ensure that the energies of all partners and partnerships are aligned behind our vision for the place
- That we consistently communicate with skill and a strong understanding of the nature and reason for the conversation in genuine dialogue to help our places and partners coalesce around the key long term issues for our places.

17)

Wave Catcher

Using customer insight to drive continuous improvement

Purpose of Customer Services Directorate:

(18)

We have a clear purpose of redesigning and improving the delivery of our services in ways which meet the current and emerging needs of our customers, businesses and communities. In a period of ongoing austerity the pace of change in customer expectations is also relentless - and the adaptive council is required to keep ahead of the curve to ensure resources and expertise are best positioned to meet new demands on us. Our customer base is potentially much wider than just our residential and business base. People from outside our boundaries - visitors, extended families, business investors, public and private sector partners - have their own expectations of how we should deliver service.

Customers of public services are also increasingly digitally connected, knowledgeable and mobile. Their expectations of service quality are shaped by the very high quality of service provided to them by other suppliers for whom customer service has been a commercial imperative and competitive differentiator. Hierarchical, siloed, risk averse, top down and inward looking management of service is not fit for current purpose. Traditional organisational design limits our capability to harness the innovations that are being made more widely in our society, at the same pace of change. The digital agenda which makes information more easily accessible without the

need for direct communication with us is disruptive to traditional service design thinking. Equally it will help our staff - or internal customers - to work differently and more collaboratively. But it's not all about digital either - excellent customer services is all about setting expectations, and meeting the needs of our customers - which is all about managing our own service as highly effective businesses delivering high quality service outcomes. This requires a consistency of customer purpose across the organisation, clear performance management, and an appetite to challenge internal processes which have an adverse impact on delivery, customer expectations or on cost. It may mean investing our resources in different ways to achieve the transformation required, using customer insight to drive continuous improvement.

Customer insight is knowing how people want to use our services. It will be key to how we learn about how best to transform ourselves and our key partnerships.

> THE FULL LIST OF COMMITMENTS MADE TO THE ADUR AND WORTHING COMMUNITIES BY THE DIRECTORATE FOR CUSTOMER SERVICES CAN BE SEEN ON PAGES 35 – 38

Customer focus will improve service relevance, quality and consistency. It will reduce operating costs. It will inform new business development. It will ultimately maintain the high reputation of the Councils.

To these ends the Directorate will have a cross cutting role, working with across the themes of Economy, Community and Digital & Resources to ensure the active co-design of our service processes with customers to deliver sustainable, creative and prosperous communities. Together we can do something fundamentally different to what has gone before.

There are elements of customer service which sit outside the Directorate. There will be benefits to further cross-cutting collaboration across all portfolios and external service providers and communities to improve the relevance and responsiveness of the services we see today.

19

Stimulate innovation and offer transparency

Purpose of Digital & Resources **Directorate:**

Our purpose is to help public service transformation within and beyond our organisations with the help of digital technologies and data. We will design and build, buy or commission new digital services so good that citizens choose to use them, improving service to them while reducing our costs. We will introduce modern tools to staff, helping them be more productive and collaborate together more easily. We will develop our data and analysis capacity to drive business decision-making, and release open data to the public to stimulate innovation and offer transparency.

Our purpose is also to develop strategic and highly innovative approaches to finance and procurement, helping us adapt to the challenges ahead, identifying new ways to generate revenue as funding from central government reduces.

Our legal and human resources services will also adapt to support the Councils' ambitions, with a renewed purpose to help enable innovation and change across the business, accepting and managing risks, and supporting the workforce through periods of change and uncertainty. Our engineers and surveyors will support major projects into life, and keep our public realm maintained and repaired. We will continue to effectively respond to emergencies in partnership with other bodies and our facilities teams will continue to provide excellent customer service for our buildings and the needs of their users.

We will also support excellent programme and project management discipline across the business. Our watchword will be: 'Delivery'.

THE FULL LIST OF COMMITMENTS MADE TO THE ADUR AND WORTHING COMMUNITIES BY THE DIRECTORATE FOR DIGITAL & RESOURCES CAN BE SEEN ON PAGES 35 - 38

WAXING THE BOARD

WAXING THE BOARD

AA -

22

The fourth element of 'Surf's Up' is not a specific Wave Catcher in itself. However, without the right equipment and the right understanding of wind and sea few waves have been successfully caught by surfers.

Waxing the Board is more a set of 'must do's' or short term things that we 'must fix' in order to be fit for purpose and to have the strongest chance of delivering on our agenda. They are the things that have frustrated most, if not all of us, at times have tripped us up and may constitute areas of weakness where we honestly acknowledge we are 'behind the curve'.

Conclusion

We will use 'Surf's Up' to evaluate our progress on this comprehensive programme of projects to bring the Catching the Wave aspirations to reality. The Councils' Leadership Team will consider in depth on a quarterly basis progress (and where we are getting stuck) and report to Elected Members every six months.

These reviews will enable us to keep our approach 'live'. Once activity has been concluded where circumstances change negating the need for activity we can take it out and where new emergent opportunities arise we can ensure they are considered, defined and included.

THE FULL LIST OF THESE 'MUST DO'S' CAN BE SEEN ON PAGES 39 – 40

Whilst primarily for internal use (to ensure all of our colleagues are aware of what we are trying to do and how they 'fit' into the bigger picture) we will also use it to frame key elements of our communications strategy and ensure that we illustrate activity with some of the real life human stories behind the on-going work. A digital version of the document we will 'keep live' and build links to some of the key underlying work to enable those who are interested to learn more.

And finally - if we use 'Surf's Up' with care, attention and focus then in around two years' time we will not just have delivered on a substantial range of commitments that will help the long term health and prosperity of our places, but we will also be far more agile and adaptive organisation able to meet the challenges, opportunities and environment in which we then find ourselves.
